# *HTML Output to the IFS*

- **Works much like printer output**

- **Report is saved and never changes**

- **HTML formatting options**

    - banner
    - background
    - cascading style sheet

- **Output can include hyperlinks from report break summary to detail**

- **Report may be distributed as an email attachment**

    - formatting preserved when file is opened within your network
    - HTML report data is easy to import/parse into Excel

Cascading Style Sheets

- **A text file containing instructions a Web browser uses to display HTML**

- **Contains classes which correspond to sections of your report so you can specify things like:**

    - fonts
    - type sizes
    - colors
    - backgrounds
    - borders

- **Acts as an overlay to the HTML file to create the desired presentation**

- **Separates formatting from the HTML so you can create a reusable standard and save report development time**

- **Easy to create using many tools**

IQ Server HTML Output to the IFS Style Sheet Classes

Report Section	Style Sheet Class
Entire report when it is the only class defined	.BODY
Entire report heading if it is the only report heading class defined	.IQHPAGE
Individual lines of the report heading	.IQH01, .IQH02, .IQH03
