

The Challenge

Timely access to the vital information contained in your corporate databases is critical to your executives and end users. However, you need to comply with internal control policies and/or regulatory mandates. The *IQ SeQure*™ security management module of *NGS-IQ*™ gives you the ability to balance the need for access with the need for control.

IQ SeQure is easy to implement and flexible so that you can quickly develop a superior security plan for your organization.

Database Security

IQ SeQure extends the security features of the IBM i operating system by letting you establish profiles that control database access at the library, file (table), field, and record level. You can also secure queries against unauthorized modification and execution.

Field level control enables you to restrict a user or group of users from including specific fields in their reports. Record level control enables a single report, without modification, to return different records for different users based on their authority. This capability means a single query can serve the needs of multiple users in different territories, divisions, etc., if the structure of their report is the same.

Query Security

IQ SeQure provides query security by giving

you control of user access to the following:

- Selected libraries
- Selected queries in a library
- Selected menu options

Security officer control of the query execution environment includes these areas:

- Run Environment – Batch/Interactive/Both
- Job Timeslice
- Job Priority

You also can control who has authority to take advantage of these *NGS-IQ* functions and modules:

- E-mail and FTP
- *Qport Access*™ (to control downloading)
- *SmartView*™

Built for the IBM i

NGS-IQ enforces your IBM i security whether you are accessing your data from a Windows, Web browser, or 5250 user interface.

Enterprise Access with Control

The advanced query and reporting functions in the *NGS-IQ* product line allow users to easily build and execute their own reports. With the unparalleled security provided by *IQ SeQure*, the *NGS-IQ* products can become your company-wide solution for accessing, analyzing, and presenting your business data without compromising data security.
