

NGS-IQ gives you a robust query, reporting, analysis, presentation, and data transformation environment built for i5/OS and DB2. You get the function, meta-data, change management, control, and auditing you need. No more running multiple queries to create one report. No more worrying about security and performance.

▲ **INFORMATION TECHNOLOGY**

NGS-IQ connects Excel and other Windows applications to your System i (AS/400) data. You can send output to new or existing Excel worksheets and ranges, preserve formatting, and refresh formulas and charts, in the process. Ask us about our Web portal solution for financial reporting and analytics.

▲ **FINANCE**

NGS-IQ can transform sales reports and time consuming spreadsheets into dynamic, graphical Web performance dashboards you can access wherever your work takes you. Point and click your way through key performance indicators and metrics to see what matters most about your customers, sales, campaigns, and opportunities.

▲ **SALES / MARKETING**

NGS-IQ provides you with real-time access to the data you need to answer customer inquiries and generate reports. Run reports from your Windows desktop, hyperlinks displayed on a custom Web portal, or menus. NGS-IQ can instantly produce a report, convert it into an Adobe PDF file, and e-mail it where it needs to go.

▲ **CUSTOMER SERVICE**

Reduce stock outs, get the insight you need to cut inventory costs and improve internal communication with NGS-IQ. You don't need a top-of-the-line Windows PC and your reports can prompt you at run-time for dates, carriers, suppliers, product numbers, and other variables.

▲ **WAREHOUSING**

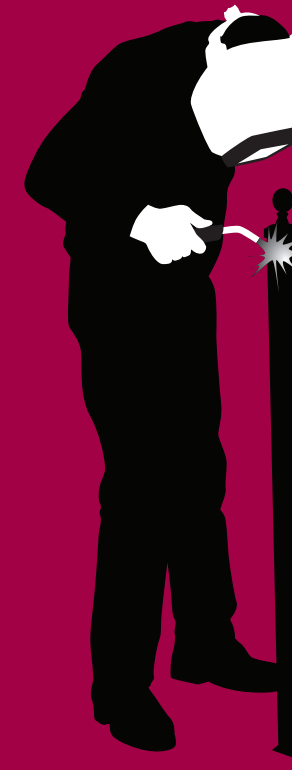

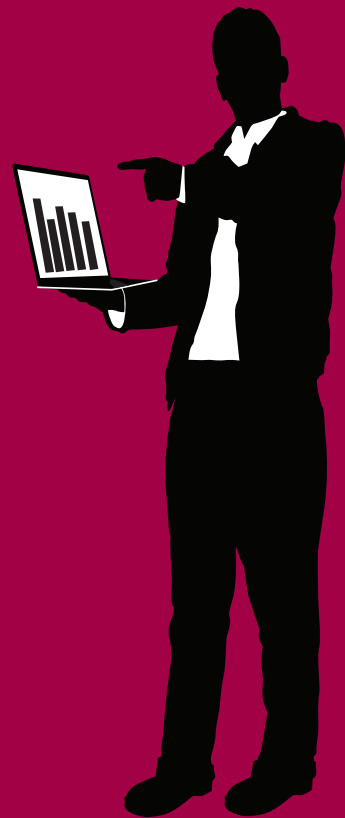

NGS-IQ is ideal for analysts who need to study wages and benefits, taxes, staffing levels, and labor data; or respond quickly to auditors. SmartView models let you pivot, drill-down, chart, highlight, and more.

▲ **HUMAN RESOURCES**

With NGS-IQ you can monitor quality, production lines, inventory, and other critical information in real-time. Many NGS-IQ users find they now need far fewer reports than in the past because NGS-IQ helps them present their data more effectively.
