

Enable Query/400 Now for Excel, PDF, Email, and More!

Imagine the possibilities if you could expand the limited query and reporting capabilities of IBM Query/400 without recreating or converting your existing queries! You can – New Generation Software, Inc. (NGS) offers a Query/400 API that allows IBM i (iSeries, AS/400) customers and ISVs to run and enhance queries developed with IBM Query/400 from within NGS' NGS-IQ™ reporting and analytics software. This API enables you to take advantage of NGS-IQ's query functionality while giving your users a wide range of reporting options.

IBM Query/400 output can be sent directly to Excel spreadsheets, Access tables, Word documents, NGS' multidimensional OLAP models, Adobe Acrobat PDF files, HTML, XML, CSV, TXT, and other popular formats. You also gain the ability to use NGS-IQ's integrated email and FTP functions to distribute your results in useful formats like PDF, when and where needed.

Run-time record selection, conditional logic, meta data, Join Wizards, and date conversions are just a few of NGS-IQ's advanced query functions that the API extends to your IBM Query/400 queries. You'll also appreciate that you can run an entire series of IBM Query/400 queries in a specified order before invoking the output enhancement functions.

Preserve the Value in Existing Queries

As a long-time developer of reporting and analytics software for IBM i users, we know that the extensive knowledge of database relationships and unique business processes embedded in your Query/400 reports represents a valuable source of intellectual capital you would like to preserve as you implement new analytics software. Our Query/400 API helps

you do that without rewriting or converting a single query. To assist you in using the API, we provide a sample program with source code that lets you run up to ten Query/400 queries in sequence when the NGS-IQ query executes.

Implement New Analytics Capabilities as Your Schedule Permits

With NGS' Query/400 API you can immediately leverage your company's past development efforts and the database knowledge embedded in your existing queries. Your path to a strong ROI is shorter than ever – you can implement the additional features of the NGS-IQ solution over time. For companies with SOX, HIPAA, PCI, or other compliance concerns, NGS' security management system, known as IQ SeQure™, can give you additional control over the authority users have to data retrieved by Query/400 queries run through the API.

No Hardware or IBM i OS Upgrade Required

You can take advantage of the NGS-IQ Query/400 API even if you are still running an older IBM i V5 operating system release.

Experience the Benefits of NGS-IQ

NGS-IQ enables business users and analysts to write queries that can satisfy nearly any query, reporting, analytics, and presentation need.
