

## High Performance Analytics and Visualization for Operational Data

The Qport® SmartView module of NGS-IQ™ enables users to transform query output files into analytical presentations in seconds. You can study data such as budgets, sales, orders, payroll, inventory, and shipments by periods of time, companies, products, customers, vendors, and other factors. If you can think of a way you want to monitor your company's performance, and you have the data, you can visually analyze it with SmartView.

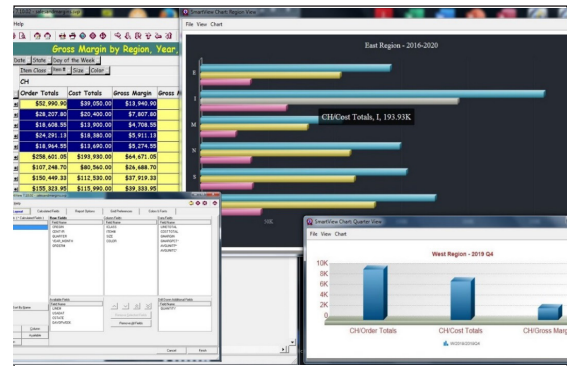

### Remarkably Powerful and Easy to Use

SmartView enables anyone, not just IT professionals and Excel power users, to manipulate, study, pivot, chart, filter, drill into, export, and share important data without writing formulas, programs, or scripts.

SmartView summarizes your view of your data based on how you organize the fields in your query output. You can have any number of drill-down levels in your matrix and summarize any number of data fields by row and column at each drill down level.

You can filter your view to isolate and contrast related business factors, calculate new values, export data sets to Excel and HTML, chart your data in a wide range of formats, and share data with other users.

Users enjoy the ease of use and flexibility of a Microsoft® Excel-style interface while using

the scalability and power of IBM® i to support analytics. Instead of maintaining massive Excel workbooks with complex formulas and pivot tables, users can quickly interact with multidimensional displays of read-only data.

Due to its design, SmartView can provide answers in seconds—whether you want to see sales by division and territory; product orders by quarter, month and week; shipments by distribution center; aged payables in 30, 60, and 90-day buckets; or any other type of analytical report.

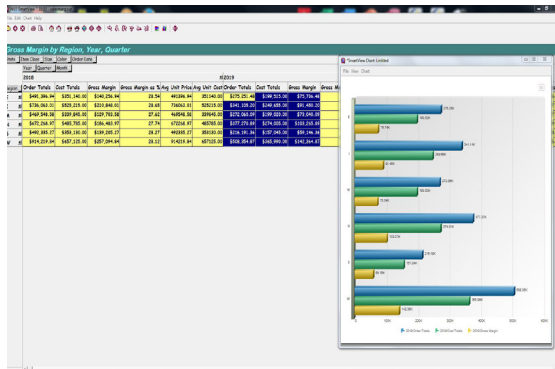

You can format, pivot, filter, chart, drill into, and analyze your data in virtually unlimited ways. Your matrix can include calculated values like margins, averages, totals, percentages of totals, and other information at each drill-down level.

### Integrated Data Visualization

SmartView allows you to design and customize charts, save charts within your matrix, and design chart templates you can share with others. SmartView charts are in HTML5 format and can be exported in a wide range of popular graphic formats to use in presentations or elsewhere.

I N F O R M A T I O N W H E R E I T C O U N T S

You can also select fonts, type sizes, type styles and colors, background colors, titles, numeral formats, critical value highlighting rules, and other elements to make your data easy to see and understand.

### Fast Access to Real-Time Operational Data

You can refresh a *SmartView* matrix with new data in one click. If you like, you can password protect your matrix so other *SmartView* users can analyze the data but not refresh the matrix or change your layout.

*SmartView* includes a built-in zip utility so you can zip and share matrices with other *SmartView* users via the Web or email. Even traveling or off-network users can open, study, and work with the data you want them to see.

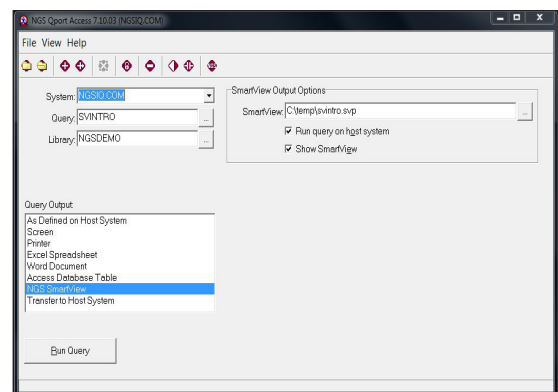

### Complete Integration with NGS-IQ

*SmartView* is an integrated module of the *NGS-IQ* query, reporting, and analytics system. This integration means you benefit from the comprehensive database extraction, formatting, calculation, and aggregation features of *NGS-IQ* when transferring data to *SmartView*. Also, you can provide your managers with easy access to your data without compromising security or performance.

### What is NGS-IQ?

*NGS-IQ* is a comprehensive query, reporting, and analytics solution built for IBM i. It includes both IBM i and Windows-based data extraction and reporting tools that provide you with advanced functionality and presentation features.

*NGS-IQ* users can create and run queries on IBM i from Windows, Web pages, portals, Web applications, Web-enabled smartphones, and 5250 “green screen” interfaces.

*NGS-IQ*'s *Qport® Access* module on the Windows desktop is the bridge that delivers data to *SmartView*. *Qport Access* provides runtime access to *NGS-IQ* queries and supports the ad-hoc entry of selection criteria, calculation formulas, and output target, including Excel, Word, Microsoft Access, the Windows display, and IBM i or ASCII printers. All *NGS-IQ* queries operate in accordance with your IBM i security settings. You may also develop database and report authority specifically for your *NGS-IQ* users with the *IQ SeSure™* module.
