Building APIs for IBM i Queries, Reports, and Applications

Do you have customers, suppliers, financial institutions, public agencies, or other trading partners who share data through application program interfaces (APIs)? Do you run your enterprise applications on IBM i? If so, you need an easy way to develop and use those APIs. Your queries and operational reports also need to include that data.

Kato Integrations enables you to develop APIs in RPG on IBM i. *NGS-IQ* enables you to connect those APIs to your queries and reports to provide managers with a complete picture. You can deliver those reports and datasets to Microsoft Excel, Access, and Word; Adobe PDF; web pages; multidimensional models; and more.

Please attend our free webinar to learn how Kato Integrations and NGS can simplify and automate your API development, enterprise reporting, and analytics work.
