Creating Great Data for Enterprise AI

Enterprise AI requires many data types and sources. Versatile, modern BI and extraction, transformation, and loading (ETL) software can support your efforts by helping you create tables, reports, and OLAP models your AI software can use to discover insights.

Please join us for this FREE presentation. We'll review data security, privacy, governance, and quality issues surrounding AI and explain how IBM i and a modern BI and ETL solution like *NGS-IQ* can help you get started.

Who Should Attend:

- IT professionals who work on IBM i
- Analysts interested in using DB2 on i to support AI projects

NewGeneration Software, Inc.
