

It's Time!

## It's Time for New IBM i Query, Reporting, and Analytics Software

IBM retired Query/400 and DB2 Web Query long ago. Is your company *still* at the party?

Don't keep your users waiting. Attend this webinar and see how **NGS-IQ** simplifies query creation, automates query execution, and empowers users without compromising IBM i security or performance.

**NGS-IQ** saves users time whether you need to create ad hoc queries, production reports, graphical data visualizations, or distribute files via email or FTP. It also can play a role if your company someday asks you to deliver a cleansed dataset in support of an AI project.
